Bleeding and Venting Valves

Continuous Bleeding and Venting Valves EB 1.20

Large Sized Cast Bleeding and Venting Valve

Technical Data

Connection DN 80/65 - 200/150

Nominal Pressure PN 16
Operating Pressure 0 - 16 bar
Flow Rate 7770 Nm³/h
Temperature 200 °C
Medium liquids

Description

Bleeding and venting valves remove air or gases from systems or pipelines without requiring an external energy input. When a system is drained they act as venting valves; venting may be prevented by fitting a non-return valve.

The EB 1.20 bleeding/venting valves are float-controlled robust valves made of spherical-graphite cast iron to handle large air volumes e.g. in sand filters. The internal components are made of made of Cr/CrNiMo-steel/red brass and the float is made of CrNiMo-steel. Up to 130 °C the valve cone is fitted with a soft seal; up to 200 °C the seal is metallic

The simple design makes it easy to specify, install, handle and service these valves in an industrial environment.

Valves for continuous bleeding must not be overdimensioned. If a larger valve size is selected, a higher working pressure range with a correspondingly lower flow volume should be chosen. In case of doubt we shall be happy to advise you.

On filter vessels the bleed connection is often located in the middle of the vessel. If the flow volume is large and the distance between distribution funnel and bleed connection small, the incoming water jet hits the bleed connection. This will impair the efficiency of the bleed valve and can result in water hammer. This problem may be avoided by installing a baffle or by placing the bleed connection away from the centre

Options

- » Manual bleed valve made of stainless steel (CrNiMo steel)
- » Rubber or plastic coating for corrosive fluids
- » Non-return valve to prevent venting
- » Special versions on request

Operating instructions, know how and safety instructions must be observed. All the pressure has always been indicated as overpressure. We reserve the right to alter technical specifications without notice.

Bleeding and Venting Valves

Continuous Bleeding and Venting Valves EB 1.20

Large Sized Cast Bleeding and Venting Valve

| Seat Diameter [mm] | | | | | | |
|--------------------|---------------------|--------|---------|---------|--|--|
| pressure | nominal diameter DN | | | | | |
| range bar | 80/65 | 100/80 | 125/100 | 200/150 | | |
| 0 - 2 | 30 | 40 | 50 | 78 | | |
| 0 - 4 | 24 | 32 | 40 | 61 | | |
| 0 - 8 | 20 | 24 | 30 | 46 | | |
| 0 - 13 | 16 | 20 | 24 | 36 | | |
| 0 - 16 | 14 | 18 | 22 | 36 | | |

The quoted flow volumes apply to a fully open valve i.e. in start-up condition at 0 $^{\circ}\text{C}$ and 1013 mbar. With continuous bleeding e.g. of filter vessels, the maximum flow volume is 30 % less on average.

* Please note: Smaller seat diameter for higher pressure range. If the selected working pressure range is too high, the flow volume may be inadequate.
