

Pressure Control Valves

Pilot-operated Control Valves XLC 310/410 (RP 115)

Pilot-operated Pressure Reducing Valve

Technical Data

Connection DN	40 - 600
Nominal Pressure PN	10, 16, 25
Inlet Pressure	up to 25 bar
Outlet Pressure	0.7 - 7 / 1,5 - 15 / 8 - 24 bar
K _{vs} -Value	20 - 3235 m ³ /h
Temperature	70 °C
Medium	water

Description

Self-acting pressure reducers are simple control valves offering accurate control while being easy to install and maintain. They control the pressure downstream of the valve without requiring pneumatic or electrical control elements.

The XLC 310/410 (RP 115) pressure reducing valve is a pilot-controlled control valve consisting of main valve with position indicator, control unit, pilot valve, pressure gauge, stop valves and connecting pipes. The main valve cone is fitted with a soft seal. This valve which has been specially developed for drinking water applications, features an electrostatically deposited coating on internal and external surfaces and meets the KTW recommendation of the German Ministry for Health.

The control unit contains adjustable restrictors which allow the control characteristics of the pressure reducer to be matched to the system (closing, opening and response speeds).

The pressure reducer is completely piped. It does not require any additional pilot lines.

The pressure difference between inlet pressure and outlet pressure must be at least 0.5 bar!

The particle size of the medium shall not exceed 0.3 mm, otherwise a suitable strainer must be installed upstream of the valve.

These valves are no shut-off elements ensuring a tight closing of the valve. In accordance with DIN EN 60534-4 and/or ANSI FCI 70-2 they may feature a leakage rate in closed position in compliance with the leakage classes V.

Standard

- » Pressure stage PN 16
- » Designed acc. to EN-1074/4
- » Flanges as per EN 1092/2
- » Body made of spheroidal cast iron GJS 450-10 with epoxy coating in blue RAL 5005, thickness min. 250 µm
- » Internal parts, pilot valve and piping made of stainless steel 1.4301
- » Coating as per DVGW W270 and KTW recommendation of the German Ministry for Health

Options

- » Set pressures < 0.7 bar and also up to 25 bar
- » Pressure stages PN 10, PN 25
- » Body with reduced flow rate
- » Throttle cone
- » Anti cavitation cone
- » Special designs:
 - differential pressure control valves
 - flow control valve
 - float valve
 - others on request

Operating instructions, know how and safety instructions must be observed. The pressure has always been indicated as overpressure. We reserve the right to alter technical specifications without notice.

Pressure Control Valves

Pilot-operated Control Valves XLC 310/410 (RP 115)

Pilot-operated Pressure Reducing Valve

Materials - Main Valve

Temperature	70 °C
Body	spheroidal cast iron GJS 450-10 Epoxy-coated*
Cover	spheroidal cast iron GJS 450-10 Epoxy-coated*
Internals	stainless steel 1.4301 optional 1.4404
Spring	stainless steel
Valve Seal	NBR optional EPDM
O-Ring	NBR optional EPDM
Diaphragm	NBR-Nylon-reinforced optional EPDM
Screws	stainless steel

* in accordance with KTW-recommendation and DVGW W270, thickness min. 250 µm

Materials - Pilot Circuit

Control Unit	stainless steel
Pilot Valve	bronze, internals made of stainless steel, diaphragm made of NBR
Filter Sieve	1.4404
Sense Line	stainless steel
Fittings	brass
Shut-off Valves	brass, nickel plated
